

Lower Dust For Better Science

CareFRESH® Lab Bedding is now **BioFresh™ Comfort Bedding**. In addition to having a new name, our lab bedding now has lower dust.

Lower dust levels in Absorption Corp's premium lab bedding products mean fewer allergens and cleaner cages for healthier animals, happier technicians and better science.

- DUST REDUCTION INITIATIVE** – Our 2011 goal was to improve overall dust removal capability and minimize variability across manufacturing lines. Dust removal improvements have been implemented across ninety percent of our lab bedding production capacity, with the remaining improvements to be completed by Q3 2012.
- IMPROVED EQUIPMENT AND PROCEDURES** – Investments and new work processes ensure our products are consistently low in overall dust levels.
- SIGNIFICANT REDUCTION IN RESPIRABLE DUST** – We achieved a 47% reduction in respirable dust in our Natural Comfort Bedding, and 50% reduction in our White Comfort Bedding, making our products even better for animals and technicians who are sensitive to dust.
- MUCH LESS TOTAL DUST** – Improvements resulted in 37% and 35% reductions in total dust in Natural and Ultra Comfort Bedding, respectively, meaning cleaner cages, less mess, and better viewing.
- CONTINUOUS IMPROVEMENTS** – Additional capital investments and changes in process control will continue to drive reduction in dust levels and decrease variability in the coming months.

We work hard every day to improve our product quality and deliver innovations that deliver better science. We have invested in new technology, equipment and procedures to enhance our products. You will see the difference!

The Science of Quality Care
